1 Survey Description

Survey: Encuesta Nacional de Hogares sobre Condiciones de Vida y Pobreza (ENAHO), carried out by the National Institute of Statistics and Informatics (INEI) of Peru, for the year 2014.

Link to the document: http://webinei.inei.gob.pe/anda_inei/index.php/catalog/249

Sample: The survey was conducted between January and December 2014. The ENAHO collects information from 24 states and is nationally representative. The sample considered is restricted to adult individuals aged 20 to 63 with information about outcome and circumstances (51,779 individuals). Section 3 of this document describes the prevalence and pattern of missing data., 78,139 individuals in the total sample and 34,532 individuals in the analysis sample. Section 3 of this document describes the prevalence and pattern of missing data.

Weights: The weights are the inverse of the probability that the observation is included because of the sampling design. It could be understood as the number of individuals in the population that an individual represents in the sample according to the 2007 Population Census and demographic projections (*weights*).

Outcome: The outcome variables are annual equivalized household disposable total (*eq_iinc*) income in dollars PPP 2017.¹

Circumstances:

- Sex (female, male)
- Race 'Ethnicity' (indigenous, afro-descendant and others, described in Table 1)
- Region of birth 'Birthplace' (25 provinces, described in Table 1)
- Father's edu. (years of education (maximum 15), described in Table 2)
- Mother's edu. (years of education (maximum 15), described in Table 2)

¹Income variable was equivalized using the square root scale.

3 Missing data analysis

3.1 Missing patterns

Figure 1: Missing patterns: *Left*: Marginal distribution of missing observations per variable. *Right*: Combination of missingness across cases

3.2 Differences in expected total equivalized household income between samples

Figure 2: Differences in expected total equivalized household income between the sample with non-missing circumstances and the total sample

3.3 Gini coefficient

Table 4: Gini coefficient in analysis sample and total sample

Wave	Sample	Gini	Lower bound	Upper bound	Average income
Wave 2014	Analysis sample	0.409	0.418	0.428	8,861
Wave 2014	Total sample	0.410	0.421	0.427	8,812

3.4 Differences in Gini coefficient between samples
