

South Korea 2001

1 Survey Description

Survey: Korean Labour and Income Panel Study (KLIPS) 2001

Link to the document: <https://www.kli.re.kr/menu.es?mid=a50101000000>

Sample: The KLIPS 2001 is a nationally representative longitudinal study of South Korean households conducted by the Korean Labor Institute and Hankook Research. The survey follows a two-stage stratified clustering method which selects 1,000 Census enumeration districts (EDs) in cities nationwide and randomly samples 5 households from each EDs. It interviews household members over the age of 15 years old and collects information on economic activities, household characteristics and social activities. The sample considered is restricted to adult individuals aged 18 years and above with information about income, religion, sex, place of birth, father's education, mother's education and parental occupation.. There are 10,534 individuals in the total sample and 9,267 individuals in the analysis sample. Section 3 of this document describes the prevalence and pattern of missing data.

Weights: The sample weights were computed by estimating the probability of participation. (hh_weight)

Outcome: The outcome variable is annualised household disposable income per capita in USD PPP 2017¹

Circumstances:

- Ethnicity (various religions described in Table 1)
- Sex (female, male)
- Region of upbringing (categories described in Table 1)
- Fathers's edu. (education levels, described in Table 2)
- Mother's edu. (education levels, described in Table 2)
- Father's occ. (Several work status categories, described in Table 3)

¹Income variable was equivalized using the square root scale.
