

United States 2014

1 Survey Description

Survey: The Panel Study of Income Dynamics (PSID) is the longest longitudinal household survey in the world. The Study started in 1968 and is currently being developed by the University of Michigan. It includes data related to employment, income, wealth, expenditures, health, marriage, childbearing, child development, philanthropy, education, and other topics. This document refers specifically to the data collected in 2014.

Sample: The sample of the PSID was originally composed of approximately 18,000 people in 5,000 households, making it a representative sample of the entire country. This sample was complemented with a non-representative oversample of low-income families to facilitate the investigation of issues related to poverty and vulnerability. Over the years, the sample size has changed as the number of members in the families considered originally has grown. There are 8,937 individuals in the total sample and 7,769 individuals in the analysis sample. Section 3 of this document describes the prevalence and pattern of missing data.

Weights: Population weights are computed as the ratio between specific weights for the Panel Study of Income Dynamics (PSID) and the Current Population Survey (CPS). These weights, based on sex, age, and ethnicity, are tailored for different demographic groups. Age groups are formed, and missing values are imputed using historical data. The process ensures a more representative combined dataset for analysis.

Outcome: The outcome variables are annual equivalized household disposable total (*eq_iinc*) income in dollars PPP 2017.¹

Circumstances:

- Race 'ethnicity'(white, black, american indian, aleut, eskimo, asian, pacific islander, hispanic and others described in Table 1)
- Sex (female, male)
- Region of upbringing (6 categories described in Table 1)
- Fathers's edu. (years of education, described in Table 2)
- Mother's edu. (years of education, described in Table 2)
- Father's occ. (3 categories, High: includes ISCO 1, 2 and 3, Medium: includes ISCO 4, 5 and 6, and Low: ISCO 7, 8, 9 and 0, described in Table 3)
- Mother's occ. (3 categories, High: includes ISCO 1, 2 and 3, Medium: includes ISCO 4, 5 and 6, and Low: ISCO 7, 8, 9 and 0, described in Table 3)

¹Income variable was equivalized using the square root scale.
