Tanzania 2013

1 Survey Description

Survey: National Panel Survey 2008-2015, carried out by National Bureau of Statistics

Link to the document: https://microdata.worldbank.org/index.php/catalog/3814

Sample: The NPS is a series of nationally representative household panel surveys that collect information on a wide range of topics including agricultural production, non-farm income generating activities, consumption expenditures, and a variety of other socio-economic characteristics. The survey was first implemented in 2008/2009 and this wave is from October 2012 to November 2013. The sample considered is restricted to adult individuals aged 18 and above with information about household annual consumption and circumstances, 9,981 individuals in the total sample and 4,222 individuals in the analysis sample. Section 3 of this document describes the prevalence and pattern of missing data.

Weights: The household weights are trimmed and post-stratified (no more information about that in the documentation) (weights).

Outcome: The outcome variable is the total equivalized annual consumption in real term and expressed in USD of 2017 (conseqadj).¹

Circumstances:

- Sex (female, male)
- Religion (religion (7 categories, described in Table 1)
- Region of birth 'Birthplace' (23 categories, described in Table 1)
- Father's education (fyedu: Level of education, 6 categories, described in Table 2)
- Mother's education (myedu: Level of education, 6 categories, described in Table 2).

¹conseqadj variable was equivalized using the square root scale.

2 Descriptive Statistics

Table 1: Respondant's socio-demographics - 2013
